

## Product Information Sheet

Product Name:	Human MMP-1
Catalog Number:	72004
Size:	1 µg
Concentration:	10 µg/mL
Activity (Unit/µg):	Provided on the label
Unit definition:	One unit of protease hydrolyzes 1 picomole of 5-FAM-Pro-Leu-Ala-Nva-Dap(QXL™520)-Ala-Arg-NH <sub>2</sub> (AnaSpec Cat#60571) per minute at pH 7.5 at 25° C.
Storage:	Store at -80°C. Avoid multiple thaw-freeze cycles.

### Instruction:

Matrix metalloproteinases (MMP's) belong to a family of secreted or membrane-associated zinc endopeptidases capable of digesting extracellular matrix components<sup>1,2</sup>. MMP-1 (collagenase-1) is involved in tumor development and metastasis<sup>3,4</sup> and rheumatoid arthritis<sup>5</sup>. It is proposed as a therapeutic target for these diseases. Native pro-MMP-1 is prepared from culture medium of human rheumatoid synovial fibroblasts. MMP-1 is secreted as pro-enzyme, which consists of a propeptide of 80 amino acids, a catalytic domain of 162 amino acids, a 16-residue linker region, and a hemopexin domain of 189 amino acids<sup>6</sup>. The native pro-MMP-1 has a major Mr 52-kDa unglycosylated and a minor Mr 57-kDa glycosylated form. The proteolytic activation of the 57/52-kDa species will form 47/42-kDa active collagenase<sup>6</sup>, and a 22-kDa C-terminal fragment<sup>7</sup>.

The apparent Mr on SDS-PAGE is approximately 56kDa/52 kDa. The pro-MMP-1 can be fully activated by incubating with 1 mM APMA at 37°C for 3 hr. Its activity can be measured by FRET peptides (AnaSpec Cat#71128, Cat#71150). 10-20 ng of enzyme is sufficient for FRET-based assay.

The MMP-1 is stored in 0.1M Tris, pH 7.5, 0.1M NaCl, 10 mM CaCl<sub>2</sub>, 0.05% Brij 35, 2mM sodium azide, 1 mg/mL BSA.
